WHY RBMOTORS ?

RBMotors is proud of its strict quality requirements and standardized production processes.

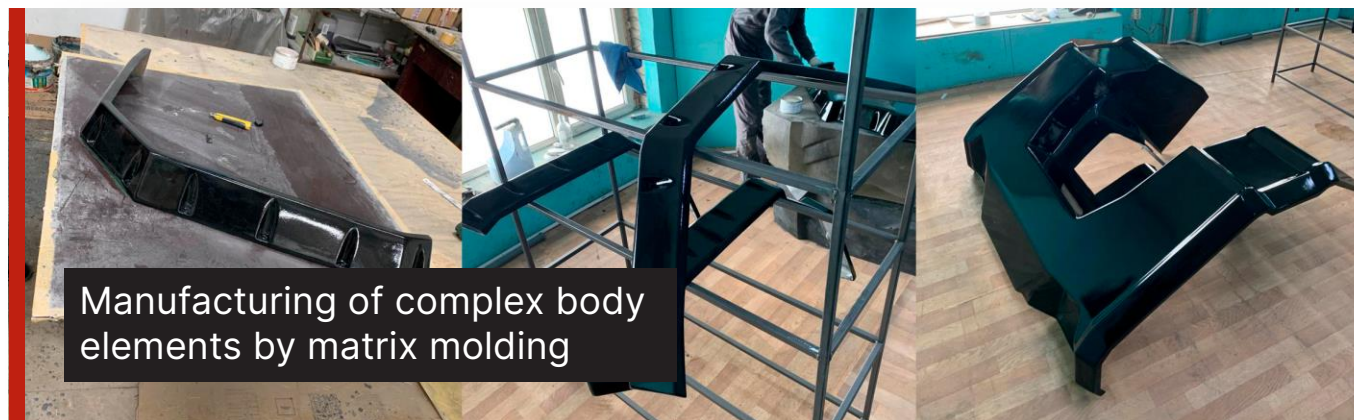

Innovative technologies and proprietary developments

Continuous upgrading of production processes,
development and implementation
of own technical solutions.

Professional equipment

Process CNC equipment makes it possible to
produce factory-quality parts quickly
and efficiently.

The best raw materials and components

—

We work directly with component manufacturers and only with trusted suppliers of raw materials, which allows us to be confident in our technology.

Qualified specialists

—

We have assembled a team of real fans of their business, each of them has passed a difficult selection process, and has proven his expertise and skill.

ATVs - ALL-TERRAIN VEHICLES

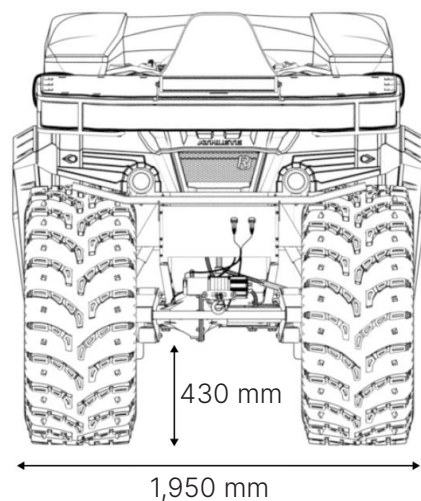

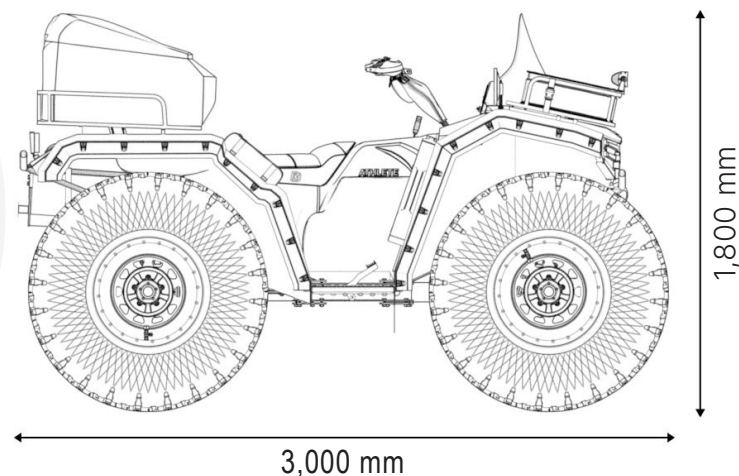

ATHLETE®

Access to hard-to-reach and remote areas

The Athlete® ATV has phenomenal off-road terrain performance, and allows you to get to the most inaccessible places.

It is a whole complex of components and assemblies, each of which expands the possibilities of overcoming off-road: a reliable and powerful engine, huge low-pressure wheels, differential locks, a removable winch - all this will allow you not to limit yourself in choosing a route for a trip.

Transportation of goods and passengers

Thanks to its impressive dimensions and powerful engine, the ATV enables to take 3 passengers with you and carry up to 400 kg (500 litres) of cargo.

All-season off-road machinery

The ATV was designed to move in a variety of conditions, be it swamps, snow, as well as water obstacles, and is by far the most versatile off-road vehicle.

Brutal design and reinforced fiberglass body

The state-of-the-art CAD/CAM technologies are used in the development and production of body elements.

Aggressive and strict body lines, complex body elements, designer arch extenders – each element is made by matrix molding from reinforced fiberglass, which ensures high performance.

Reinforced galvanized frame

The frame is designed to provide the necessary structural rigidity without compromising the overall weight of the ATV.

It is made of high-quality steel pipe produced by "Seversky Pipe Plant" with a diameter of 33.5 mm. The wall thickness is 3 mm.

Each frame must undergo a hot-dip galvanizing procedure, which provides long-term (more than 10 years) corrosion protection.

Huge wheels with low pressure tires

Due to the low pressure, the area of tire contact with the ground increases significantly – this gives a huge advantage when driving on harsh off-road terrain. Due to the large displacement, the ATV has a positive buoyancy – thus the ATV is able to overcome deep water obstacles.

Shortened axles of UAZ Timken

Time-tested, reliable UAZ Timken axles are shortened to maintain the optimal dimensions of the ATV. A huge advantage is the ease of maintenance and maintainability throughout the CIS in any car service centre. They are equipped with electric or mechanical differential locks and a pneumatic support.

Through shaft in automatic transmission and factory cardans

When using wheels of this size, an important aspect is the transmission of torque to them - on Athlete® ATVs this is implemented using a drive shaft in the automatic transmission and factory cardans.

Disc front and rear brakes

All Athlete® ATVs are equipped with a reliable braking system using components from Lexus RX350. Disc brakes are installed both at the front and at the rear.

Moisture protection of relays and fuses

Water obstacles and rain can disable the electronics of any unprepared equipment, therefore, our ATVs use only moisture-proof relays, which are installed together with fuses in a moisture-proof housing to eliminate any possibility of short circuit or corrosion of contacts.

Ease of access for maintenance

Getting to the necessary ATV components is an easy task for Athlete® owners. The engine and all moving elements are covered with a multi-component housing, the elements that protect the engine are fixed on quick-release mechanisms for easy access to maintenance units.

We provide a complete package of documents required for registration of the ATV:

- **Purchase and sale agreement**
- **Technical data sheet**
- **Self-propelled vehicle certificate of title**
- **Operation manual with warranty card and maintenance schedule**
- **Specification**
- **Acceptance certificate**

**By purchasing Athlete®
you save 120,000 ₺**

Payment of the recycling fee
is not required, legally!

Self-propelled vehicle certificate of title

An analogue of the VCT (vehicle certificate of title) for cars.

The presence of a self-propelled vehicle certificate of title or VCT is a prerequisite for registering vehicles and allowing them to participate in road traffic.

Recycling fee for special equipment

This is a mandatory payment to the state budget.

It is a one-time payment and, often, when buying equipment, the state obliges to pay a recycling fee before registration.

**PAVEL**

"Nothing rattles, the vacuum does not hiss, it is clear that everything is done humanly, neatly. All buttons, inputs, outputs are rubberized, the chassis is separately output. There are heated handles and seats. The frame is galvanized. The engine "whispers", the transmission "whispers". I am very pleased with the purchase. It's just great!"

**ALEXANDER**

"A month of driving, 800 km run. The impressions are very good. The vehicle is pleasant. For a hunter, I think it is indispensable. There are no questions about the off-road performance. It always takes you to the hunting place. You can drive almost anywhere. It can drive even where other vehicles cannot pass. We are no longer considering other ATVs."

**MIKHAIL**

"I like the steering, the steering wheel is sensitive. Braking is good. I liked the overall assembly quality. The guys have galvanized frames - after a year of work, there are no kinks or rust. High-quality electrics is done. I see that the guys are trying hard. I also note that the arches and mudguards work, protect from dirt. This is also a huge plus."

1 Communication with the manager

Leave a request, or call us – the manager will answer all your questions and tell you in detail about our vehicle.

2 Configuration selection

You can choose one of the four ready-made configurations or assemble your own on our website in the "Configurator" section.

3 Conclusion of a contract

We will send the contract to your email, after signing you make an advance payment, pay the rest before shipment of the ATV.

4 ATV delivery

We will select and coordinate with you the most optimal delivery option, prepare the equipment for transportation, and ship it to the shopping centre or the carrier.

5 Getting an ATV

The ATV is delivered to the agreed address. It is important to perform zero maintenance, you can find out more details on the technical support line.

6 Instruction on the controls

By contacting the technical support line, you will receive instructions on how to control the ATV.
